1 Installing Microsoft Visio via the Click-to-Run Installation Technology

Engineering Base (EB) uses Microsoft Visio to create and edit diagrams. Visio may already be installed on your PC as part of Microsoft Office. However, not all versions of Visio are compatible for use with Engineering Base. If you do not have Visio installed or your Visio version is not supported by EB and you have purchased Visio with EB, AUCOTEC will provide you with a version that is compatible with EB.

In that case, AUCOTEC provides you with a ZIP file **Visio 2019 C2R Setup.zip** which enables you to install a Click-to-Run installation of Visio 2019.

To run the Click-to-Run installation, your personal computer must be connected to the internet. If you need assistance to carry out the following installation, we recommend contacting the AUCOTEC Helpdesk.

To find out more about potential constraints concerning the parallel installation of different versions of Microsoft Office, installation technologies and Visio, please refer to the Microsoft documentation <u>Supported scenarios for installing different versions of Office, Pro-</u><u>ject, and Visio on the same computer</u>.

To carry out the installation:

- 1. Ensure that you have an internet connection and administrator rights on the personal computer on which you want to install Visio. If this is not the case, please contact your system administrator.
- 2. Save the ZIP file in your **Downloads** folder so that you can use a path that is as short as possible.
- 3. Open the **Downloads** folder via the Windows Explorer, right-click the file **Visio 2019 C2R Setup.zip** and select **Extract All...** from the shortcut menu.
- In the following dialog Extract Compressed (Zipped) Folders, please confirm the preset folder name C:\Users\<User name>\Downloads\Visio 2019 C2R Setup by clicking the Extract... button.

In this example, the user name is represented symbolically. In your case, it will contain the user name that you have used to log on to MS Windows.

- 5. Click the Windows Start menu and enter **CMD** via the keyboard.
- 6. Right-click the option **Command Prompt** once it is displayed in your start menu.
- 7. On the shortcut menu, click **Run as administrator**.

This opens the command prompt.

8. Switch over to the command prompt and enter the following command using your actual user name:

cd "C:\Users\<User name>\Downloads\Visio 2019 C2R Setup"

9. After that, enter the following command:

setup /configure ./configuration_nnnn.xml

To install Visio in the required language, you also have to enter the respective language ID on entering the command. To do so, replace the place holder **nnnn** in the command line by the language ID outlined in the table below.

Language	Language ID	Name of the configuration file
English	2057	configuration_2057.xml
German	1031	configuration_1031.xml
French	1036	configuration_1036.xml
Spanish	1034	configuration_1034.xml
Italian	1040	configuration_1040.xml
Portuguese (Brazil)	1046	configuration_1046.xml
Swedish	1053	configuration_1053.xml
Polish	1045	configuration_1045.xml
Czech	1029	configuration_1029.xml
Russian	1049	configuration_1049.xml
Chinese	2052	configuration_2052.xml
Korean	1042	configuration_1042.xml

Using this command starts the installation of Visio 2019 in the required language. The necessary files are downloaded from the internet, and the installation is carried out.

- 10. After the installation, please start Visio 2019. You may get a message indicating that the product must be activated.
- 11. In Visio, click File / Account / Change Product Key.
- 12. In this section, enter the product key that you have previously received via AUCOTEC.
